Dear Mr. Smith:

Our recent analysis of the EDC spec 2010-2 for authorization requests and settlement files you submitted via IPN show your product to be within the file format guidelines for the First Data Corporation North platform.

File Format Specifications that were utilized:

EDC spec 2010-2 North Platform

This letter serves as notification that your product, FDMS Integrator has been validated as compliant with the file format guidelines by First Data Corporation North platform.

The record format validation was successful and includes the following:

CONNECTIVITY	MARKET SEGMENT(S)	ENTITLEMENTS (CARD TYPES)	FEATURES / FUNCTIONALITY
Secure Transport	Restaurant and Retail	Visa, MasterCard, AMEX, Discover, Diners, JCB, EBT, Triple des Debit	Manual Key track 1 and track 2, Visa CPS Qual: Retail and Restaurant, Other Features: Card Present, AVS, Xtn Types: Auth/Capture, Off Line (Add), Credit, Settlement, Full reversal Xtn Handling: Multi-Trans New Bin Ranges: Discover AMEX CAPN Discover full service Visa 62.23 VAR ID VNT002

The card associations update their requirements periodically, generally twice per year. FDMS will issue updates to its format specifications from time to time, usually in conjunction with the card association revisions to their rules. All FDMS specification updates are available online at www.fdms.com. You should review this site for updates frequently. You will be required to update, retest and recertify your application as specifications are updated.

In addition to this FDMS validation, your POS products (all versions) must undergo and successfully complete a Payment Application Best Practices (PABP/PA-DSS) data security standards audit by an approved PCI security assessor. Software vendors must ensure that all of their end-users (merchants) are fully updated to compliant versions of their POS products.

In the event that this software requires code changes, in order to maintain ongoing certification with current FDMS requirements and Card Association processing guidelines, you must re-certify with FDMS and re-validate with your PABP security assessor. Note, validation of compliance with PABP guidelines and Card Association requirements is not a guarantee against data security compromise and resulting liability. The PABP guidelines and Card Association requirements are subject to change periodically. It is each POS software vendor's responsibility to maintain compliance with the most current guidelines and requirements for their respective POS products.
