

LIEBERMAN SOFTWARE™

Lieberman Software Corporation leverages /n software ERP Integrator to bridge their award-winning identity management and security solutions with SAP NetWeaver.

The Challenge

- Allow authorized SAP users access to privileged user accounts in a secure and audited manner, a functional requirement of security auditors and regulators.
- Seamlessly integrate SAP connectivity across supported platforms and technologies.
- Deliver new SAP functionality quickly to meet aggressive release timelines.

SAP NetWeaver a strategic software platform used by enterprises world-wide to enhance business insight, increase productivity, and simplify IT management. As the foundation for SAP applications, NetWeaver is flexible and infinitely customizable, enabling businesses to connect systems and processes.

SAP NetWeaver's vast extensibility enables 3rd party application providers like Lieberman Software to extend SAP with essential enhancements to overcome IT management and business challenges. Lieberman Software provides tools for the mass security/configuration reporting and remediation, as well as cross-platform solutions to proactively manage privileged identities. Through customer demand Lieberman identified market opportunities for enabling their identity management solution for SAP customers, alleviating a common pain-point for large corporations and government agencies imposed by security auditors and regulators.

"SAP is a strategic platform for many of our customers, and we sought a way to extend our products with SAP NetWeaver support in order to make the most of on these opportunities," said Philip Lieberman President of Lieberman Software. "We evaluated Java and other interfaces to the SAP platform, however the /n software SAP components ultimately provided the fastest and most robust solution for SAP enabling our products."

The Solution

- Use the /n software ERP Integrator for SAP as an API / protocol bridge between SAP systems and Lieberman Software products.
- Leverage easy-to-use component interfaces, support resources, demos, and documentation to quickly deliver new functionality and take advantage of market opportunities.

A core capability of Lieberman software is providing tools for IT and application administrators that enable users with the ability to understand and manage where and how security credentials are used. Using the /n software SAP components, they were able to rapidly deliver their identity management expertise to the SAP marketplace. Lieberman software products are now able to provide the same credentials discovery and management capabilities for businesses that rely on SAP products.

“The /n software ERP Integrator for SAP made working with SAP dramatically easier, and enabled us to bootstrap our initial integration in less than a week. While the SAP documentation is notoriously complex and confusing the samples and documentation from /n software were straightforward and helped us build our solution quickly.”

-- Philip Lieberman, President, Lieberman Software

The Result

- Rapid integration of SAP NetWeaver. Integrated new capabilities in under 2 weeks leveraging the /n software SAP components.
- Extensible design enabling Lieberman Software to easily add additional functionality as customers gain familiarity with SAP integration.

With the /n software SAP components, Lieberman Software is able to add SAP NetWeaver support to their identity management solutions in record time. The easy-to-use component interfaces offered tremendous flexibility for integration and drastically reduced man hour requirements. Combined with product samples, documentation, and other support resources, the /n software components allowed Lieberman Software to quickly add new functionality to their products to take advantage of new market opportunities.

“We have been using other components such as IP*Works for many years and they have been an excellent,” explained Lieberman. “/n software and its components have been a wonderful resource to allow us to rapidly extend the functionality of our products.”
